Bengaluru, Karnataka, India | +91-9449237762 | tanushvelgpudi123@gmail.com | [linkedin.com/in/tanush-v](https://www.linkedin.com/in/tanush-v)

PROFESSIONAL SUMMARY

Entry-level MLOps / Machine Learning Engineer with hands-on project experience in building and deploying machine learning pipelines using Python, Docker, Kubernetes, MLflow, GitHub Actions, and AWS. Skilled in ML model training, experiment tracking, model versioning, CI/CD automation, data validation, and cloud-native model deployment. Interested in building reliable, scalable, and production-oriented AI systems.

TECHNICAL SKILLS

Programming	Python, SQL, Bash/Shell Scripting
Machine Learning	Machine Learning, Deep Learning, Model Training, Hyperparameter Tuning, Feature Engineering
MLOps & DevOps	Docker, Kubernetes, MLflow, DVC, CI/CD, GitHub Actions, Model Versioning, Model Monitoring
Cloud	AWS EC2, S3, SageMaker, Cloud-Native Deployment
Data Engineering	ETL Pipeline Design, Data Ingestion, Data Validation, Dataset Management
Frameworks & Tools	Scikit-learn, TensorFlow/PyTorch, Git, Linux

PROJECTS

End-to-End ML Pipeline with MLflow & Docker

Python | MLflow | Docker | Kubernetes | 2024

- Designed an automated ML pipeline covering data ingestion, preprocessing, model training, evaluation, and deployment.
- Integrated MLflow for experiment tracking and model versioning to support reproducible ML workflows.
- Containerized model-serving components with Docker and deployed them on Kubernetes for horizontal scalability.
- Reduced manual intervention by approximately **70%** through pipeline automation.

Automated ETL & Data Validation Framework

Python | SQL | Airflow/Custom Orchestration | 2024

- Built an ETL framework for automated data ingestion from multiple sources.
- Implemented schema validation and automated quality checks to provide consistent datasets for downstream ML workflows.
- Developed reusable pipeline modules to reduce data-preparation effort and improve data reliability.

CI/CD Pipeline for ML Model Deployment

GitHub Actions | Docker | AWS | MLflow | 2024

- Implemented a CI/CD workflow for automated model retraining, evaluation, and deployment following code or data changes.
- Added automated performance-threshold gates to help prevent model-performance regressions.
- Integrated Docker, MLflow, GitHub Actions, and AWS into the ML deployment workflow.

Cloud-Native Model Serving on AWS

AWS SageMaker | Docker | Python | REST APIs | 2024

- Deployed machine learning models as scalable REST API endpoints on AWS.
- Configured load balancing and auto-scaling to support variable inference traffic.
- Implemented monitoring metrics for model drift and performance degradation to support proactive model refresh cycles.

CERTIFICATIONS

- Getting Started with DevOps on AWS** — Amazon Web Services
- Critical Thinking in the AI Era** — HP LIFE
- Customer Experience (CX) for Business Success** — HP LIFE
- AI Tools Workshop** — Industry Certification
- National Guard Connecticut – Black Hawk Maintenance & Logistics Job Simulation** — 1109th TASMG

EDUCATION

MVJ College of Engineering, Bengaluru, Karnataka — Bachelor of Engineering – Artificial Intelligence & Machine Learning | 2021–Present
K.H. Kabbur Institute of Engineering & Technology, Dharwad, Karnataka — Diploma – Mechatronics | July 2021–December 2024
